**Lincoln, Neb. – May 18, 2007** — Mesa Corporation, an industry leader in document and information management, today announces a significant feature to assist in downloading data from legacy systems that lack networking capabilities. Mesa Corporation's Serial Print Manager (SPM) makes legacy information accessible to your network. Utilizing the legacy system's RS232 ports and serial printing capabilities, SPM captures the legacy data in its original format and makes it available on the network. Long term storage and rapid retrieval can be accomplished with another of Mesa Corporation's products, Archive Plus<sup>(TM)</sup>, or the client can take the file and extract the data on their own.

“There are still many old systems in IT departments that have to be maintained because the data on them is valuable. These systems use 1980's technology such as RS232 serial

communication and cannot be placed on modern networks,” said Tom Manning, President and CEO of Mesa Corporation. “Maintaining these systems can be very costly and at some point, the data needs to be transferred to current technology so it can be accessed quickly. Serial Print Manager (SPM) is the latest in our product line to assist with this very real problem. Mesa Corporation has a long history of working with systems that communicate through serial RS232 port technology. Serial Print Manager captures the data from the old computer and sends the resultant file to any network assessable folder.”

A Silicon Valley medical facility was able to extract crucial medical information from a system that had been sunsetted. This information had to be accessed quickly as it was critical to providing quality patient care. Serial Print Manager provided the facility with a file which they subsequently used to populate an existing database. In addition, the facility fulfilled an accrediting agency’s mandate regarding historical data.

### **About Mesa Corporation**

Established in 1990, Mesa Corporation provides cost-effective document management systems for companies needing to manage data, including text, images, audio, video and databases. Its systems are modular in design and incorporate the latest mass storage technologies to provide solutions for single departments to enterprise wide applications. Mesa’s clients include medical, government, media, insurance, retail and manufacturing.
